

ICE DOZER™

Introducing the IceDozer™ with **Multi-Function Brush**, which takes all the capability of the regular IceDozer™ and adds an amazingly innovative attachment. The brush has **plush and durable bristles** to bulldoze snow and other winter headaches right off your vehicle.

NEW FOR 2003!

IceDozer™ Instructions:

Multiple Hand Grips

The IceDozer was carefully designed to be simple to use by anyone, regardless of age or physique!

Always hold the rear grip first. Then by holding the front grip, apply direct pressure on the flexible scraping blade which will conform to windshield curvature to remove stubborn snow and ice deposits from your windshield.

For longer reach or hard to reach spots, hold the IceDozer's integral strut grip as shown below. Press down on the strut grip to apply force to the scraping blade.

3 Ways To Remove Ice

Shift the IceDozer's 'angle of attack' to clear any ice buildup, from thin sheet to hard, tough ice from windshield surface.

For Stubborn Ice or Snow:

Hold the IceDozer pistol grip at the lower angle so the carbide style macro teeth makes solid contact with the windshield surface. Move the IceDozer back and forth in a sawing motion.

For Moderate Ice or Snow:

Hold the IceDozer pistol grip at the highest angle so the serrated front scraper teeth concentrates its force to crack brittle ice and crusty snow as you move forward.

For Normal Ice, Frost, or Snow:

Hold the IceDozer pistol grip at the mid angle so the smooth front scraper blade clears normal ice, frost and snow from the windshield surface.

To Remove or Install Multi-Function Brush:

Snap brush onto front and bottom edges of IceDozer plow

Normal Use of Multi-Function Brush:

Simply flip the IceDozer upside down and brush away excess snow and ice

To Use the IceNotch:

Unsnap the IceDozer Brush from the plow and slide IceNotch along the rubber wiper blade
